

Automatic measuringmachine  
for gearwheels

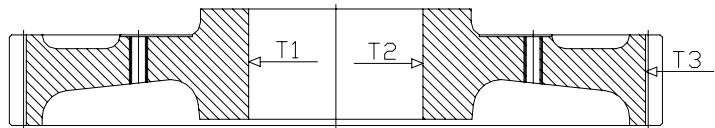

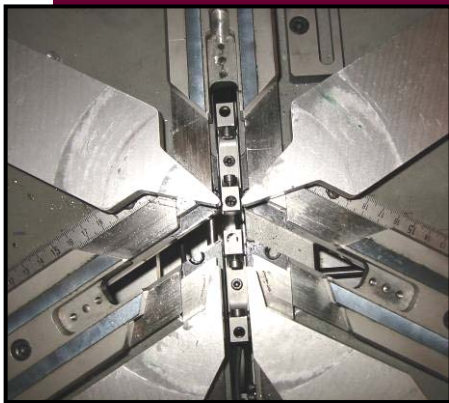

When quality becomes reality

Beside the hand measuring devices HP Metec also offers automatic postprocess measuring systems for gearwheels. Execution and degree of automation can be adapted individually after customer's request.

By simply re-equipping, gearwheels with inside diameters of 15 - 300 mm and outside diameters of 40 - 500 mm can be measured.

Possible measurements:

- Inside- and outside diameters
- Heights
- Size over balls
